

SPECIAL LECTURE

KOREAN STUDIES DEPARTMENT

TIME &
PLACE:

JUN 2, 2026 16:30 - 18:00

SEMINARRAUM KOREANOLOGIE

Entrance 5.4 (1. floor)

HOST:

JI HAEIN

TOPIC: "KPoEM: HOW TO READ THE 'KOREAN EMOTION' IN LITERATURE VIA MACHINES?"

The lecture, titled "KPoEM: How to Read the 'Korean emotion' in Literature via Machines?" explores how artificial intelligence might approach the intricate metaphors and cultural nuances inherent in modern Korean literature. Over the course of one hour, we will examine the development of the KPoEM (Korean Poetry Emotion Mapping) dataset, which consists of 7,622 entries drawn from the works of five iconic Korean poets. We will discuss how this research seeks to move beyond simple sentiment analysis by utilizing 44 fine-grained emotion categories to better capture the subtle layers of poetic expression.

ABOUT JI HAEIN

Ji Haein is a researcher, instructor, and Ph.D. student in Cultural Informatics at the Academy of Korean Studies, where he works at the Center for Digital Humanities. His work bridges AI and literature, including the co-authored book "AI to Read Literature Emotions." Recent publications include studies on deep-learning-based analysis of sensory elements in literature and a dataset on Yi Sang's short stories. He contributes to national and international projects in Digital Humanities, from AI docent platforms for cultural heritage to the development of a networked educational model in Digital Humanities. Currently, he is a guest researcher at the University of Groningen, focusing on the topic of "Graphs and Ontologies for Literary Evolution Models."
